Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

Reference is made to the following document:

D1: US-A-6 121 587 (EMTMANN SILVIA ET AL) 19 September 2000 (2000-09-19)

1) industrial Applicability :

The invention deals with an electric heater. Its industrial applicability is obvious.

2) Novelty :

Document D1, which is considered to represent the most relevant state of the art, discloses an electric heater from which the subject-matter of claim 1 differs in that the first and second terminal regions respectively of the at least one electric heating element are electrically connected to the first electrically conductive element and the second electrically conductive element.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

3) inventive Step:

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons:

The problem to be solved by the present invention may be regarded as to provide an electric heater which provides electrical connections between the temperature-limiting device and the heating element which are easier to assemble.

There is no suggestion, neither in D1, nor in the other documents of the prior art at hand, that, to improve the connections between the heating elements and the temperature-limiting device, the terminal regions of the heating elements would be attached to electrical conductive elements provided on the side of the housing of the temperature-limiting device.
